Nuclear Waste Management Gregory R. Choppin, Mikhail Kh. Khankhasayev, 1999-02-28 Separation technologies are of crucial importance to the goal of significantly reducing the volume of high level nuclear waste thereby reducing the long term health risks to mankind International co operation including the sharing of concepts and methods as well as technology transfer is essential in accelerating research and development in the field The writers of this book are all internationally recognised experts in the field of separation technology well qualified to assess and criticize the current state of separation research as well as to identify future opportunities for the application of separation technologies to the solution of nuclear waste management problems The major emphases in the book are research opportunities in the utilization of innovative and potentially more efficient and cost effective processes for waste processing treatment actinide speciation separation methods technological processing and environmental restoration

Tank Wastes Planned for On-Site Disposal at Three Department of Energy Sites National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on the Management of Certain Radioactive Waste Streams Stored in Tanks at Three Department of Energy Sites, 2005-09-05 In response to a request from Congress the U S Department of Energy DOE asked the National Academies to evaluate its plans for managing radioactive wastes from spent nuclear fuel at sites in Idaho South Carolina and Washington This interim report evaluates storage facilities at the Savannah River Site in South Carolina with a particular focus on plans to seal the tanks with grouting The report finds that tanks at the site do not necessarily need to be sealed shut as soon as the bulk of the waste has been removed Postponing permanent closure buys more time for the development and application of emerging technologies to remove and better immobilize residual waste without increasing risks to the environment or delaying final closure of the tank farms The report also recommends alternatives to address the lack of tank space at the site as well as the need for focused R D activities to reduce the amount and improve the immobilization of residual waste in the tanks and to test some of the assumptions used in evaluating long term risks at the site
