

Rectangular Waveguide

Analysis of Waveguide

Generally:

$$\vec{E} = E_x \vec{a}_x + E_y \vec{a}_y + E_z \vec{a}_z$$

$$\vec{H} = H_x \vec{a}_x + H_y \vec{a}_y + H_z \vec{a}_z$$

Longitudinal components (E_z, H_z)

Transverse components (E_x, E_y, H_x, H_y)

Let us write the total field as

$$\vec{E} = \vec{E}_\perp + E_z \vec{a}_z$$

$$\vec{H} = \vec{H}_\perp + H_z \vec{a}_z$$

$\vec{E}_\perp$ and $\vec{H}_\perp$ are vectors lying in XY plane, (E_z, H_z) are scalars

Rectangular wave guide

$$\frac{\partial}{\partial x} \vec{a}_x + \frac{\partial}{\partial y} \vec{a}_y + \frac{\partial}{\partial z} \vec{a}_z = \nabla_\perp + \frac{\partial}{\partial z} \vec{a}_z$$

For source free homogeneous medium, conductivity $\sigma = 0$

$$\nabla \times \vec{H} = j\omega \epsilon \vec{E}$$

Contemporary Developments in High-Frequency Photonic Devices Bhattacharyya, Siddhartha, Debnath, Pampa, Deyasi, Arpan, Dey, Nilanjan, 2019-06-14 Microwave photonics and information optics provide high bandwidth and precision along with ultrafast speed at a low cost. In order to reduce noise at the communication transceivers, scattering in the devices needs to be decreased, which can be achieved by replacing optoelectronic devices with photonic devices because in the latter only photons propagate electromagnetic waves. *Contemporary Developments in High Frequency Photonic Devices* is a crucial research book that examines high frequency photonics and their applications in communication engineering. Featuring coverage on a wide range of topics such as metamaterials, optoelectronic devices, and plasmonics, this book is excellent for students, researchers, engineers, and professionals.

Fractal Apertures in Waveguides, Conducting Screens and Cavities Basudeb Ghosh, Sachendra N. Sinha, M. V. Kartikeyan, 2014-06-12 This book deals with the design and analysis of fractal apertures in waveguides, conducting screens, and cavities using numerical electromagnetics and field solvers. The aim is to obtain design solutions with improved accuracy for a wide range of applications. To achieve this goal, a few diverse problems are considered. The book is organized with adequate space dedicated for the design and analysis of fractal apertures in waveguides, conducting screens, and cavities; microwave millimeter wave applications followed by detailed case study problems to infuse better insight and understanding of the subject. Finally, summaries and suggestions are given for future work. Fractal geometries were widely used in electromagnetics specifically for antennas and frequency selective surfaces (FSS). The self-similarity of fractal geometry gives rise to a multiband response, whereas the space-filling nature of the fractal geometries makes it an efficient element in antenna and FSS unit cell miniaturization. Until now, no efforts were made to study the behavior of these fractal geometries for aperture coupling problems. The aperture coupling problem is an important boundary value problem in electromagnetics and is used in waveguide filters and power dividers, slotted ground planes, frequency selective surfaces, and metamaterials. The present book is intended to initiate a study of the characteristics of fractal apertures in waveguides, conducting screens, and cavities. To perform a unified analysis of these entirely dissimilar problems, the generalized network formulation of the aperture problems by Mautz and Harrington was extended to multiple aperture geometry. The authors consider the problem of coupling between two arbitrary regions coupled together via multiple apertures of arbitrary shape. MATLAB codes were developed for the problems and validated with the results available in the literature as well as through simulations on ANSOFT's HFSS.

Radio Engineering and Telecommunications Waveguide Systems in the Microwave Range Islam, Islamov, 2023-08-26 The book systematizes numerical methods for modelling and synthesizing radio engineering and telecommunication systems in the microwave range of rectangular and circular waveguides. The author gives the theoretical foundations for the analysis and optimal synthesis of these systems and presents the results of new research. The book uses the HFSS complex to analyse, optimize, and synthesize

microwave systems operating on E type and H type waves while providing the outcomes As a result of analysis and synthesis various microwave devices with improved technical and operational parameters have been developed and on their basis a new system of waveguide paths is proposed that connects the transmitter and antenna in TV towers The book is intended for engineers and scientists involved in the design of radio engineering and telecommunication systems *Scientific and*
