Programming for Computations - Python Svein Linge, Hans Petter Langtangen, 2016-07-25

This book presents computer programming as a key method for solving mathematical problems There are two versions of the book one for MATLAB and one for Python The book was inspired by the Springer book TCSE 6 A Primer on Scientific Programming with Python by Langtangen but the style is more accessible and concise in keeping with the needs of engineering students The book outlines the shortest possible path from no previous experience with programming to a set of skills that allows the students to write simple programs for solving common mathematical problems with numerical methods in engineering and science courses The emphasis is on generic algorithms clean design of programs use of functions and automatic tests for verification

Loose Leaf for Applied Numerical Methods with Python for Engineers and

Scientists Steven C. Chapra, Dr., 2021-10-19 When we first learned to use computers as students in the 1960s Fortran was

the language of choice for most engineering and scientific computations Over the ensuing half century numerous other

languages have proven useful for implementing the numerical calculations that are so valuable to our research and teaching

Along with a succession of improved Fortran versions other languages such as Algol Basic Pascal and C C have all found their

way into our computational toolbox The basic content organization and pedagogy of this book is like our other numerical

methods textbooks In particular a conversational writing style is intentionally maintained in order to make the book easier to

read This book tries to speak directly to the reader and is designed in part to be a tool for self teaching As such we also

believe it will have value outside the classroom for professionals desiring to gain proficiency in both numerical methods and
