

4)

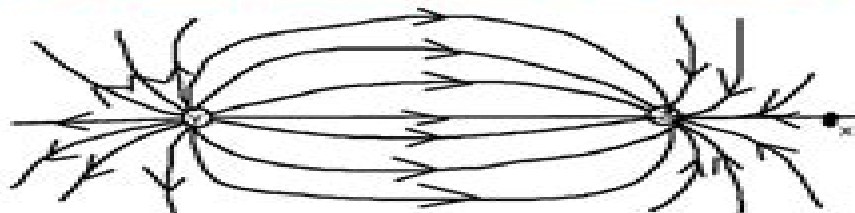

Two large, flat, parallel, conducting plates are 0.04 m apart, as shown above. The lower plate is at a potential of 2 V with respect to ground. The upper plate is at a potential of 10 V with respect to ground. Point P is located 0.01 m above the lower plate. The magnitude of the electric field at point P is

- (A) 800 V/m
- (B) 600V/m
- (C) 400 V/m
- (D) 200 V/m
- (E) 100 V/m

There electric field between the plates is uniform so the 0.01m were are given between the plates does not matter. All that matters is that point P is between the plates and our answer will be the same. To solve for the electric field between the plates we must use the equation $|E| = \frac{\Delta V}{\Delta r}$ where V is the difference in voltage between the two plates in this case being 8V, and r is the distance between the plates being 0.04m. Putting the equation together we get $8V/0.04m$ which equates to 200 V/m making d the correct answer

5)

The diagram above shows electric field lines in an isolated region of space containing two small charged spheres, Y and Z. Which of the following statements is true?

- (A) The charge on Y is negative and the charge on Z is positive.
- (B) The strength of the electric field is the same everywhere.
- (C) The electric field is strongest midway between Y and Z.
- (D) A small negatively charged object placed at point X would tend to move toward the right.
- (E) Both charged spheres Y and Z carry charge of the same sign.

Answer A and E are incorrect because positively charged objects always have field lines pointing away from them and negatively charged objects always have field lines pointing towards them which is the opposite of what A and E are describing. Answer B is incorrect because electric field strength scales with how close together the electric field lines are which varies in this example. Answer C is incorrect because the electric field is strongest when the lines are closest together which is seen closest to the charges spheres. Answer D is correct because negatively charged objects go in the opposite direction of electric field lines.
