Novel Aspects Of Insect Plant Interactions:

Novel Aspects of Insect-Plant Interactions Pedro Barbosa, Deborah K. Letourneau, 1988-10-07 Presents the first efforts to explore ecological interactions between insects and plants across several trophic levels with special focus on mediation of complex interactions by plant allelochemicals First section looks at effects of plant allelochemicals on predator prey and host parasitoid interactions Second section reveals the role of microorganisms as mediators of interactions between insects and plants Third section unifies and extends current theory to examine the effects of allelochemicals on the second and third trophic levels Final section traces the physiological effects of plant allelochemicals in animal behavior population regulation maintenance of mimicry systems and evolution of host range

Populationsbiologie der Pflanzen

SCHMID, STÖCKLIN, 2013-09-03 Das Projekt für dieses Buch entstand im Mai 1990 anlässlich des jährlichen Treffens des populationsbiologischen Arbeitskreises der Gesellschaft für Ökologie GfÖ Die Autoren möchten damit den gegenwärtigen Stand der populationsbiologischen Forschung im deutschsprachigen Raum dokumentieren und einen Überblick über das Spektrum dieser Forschungsrichtung geben Die mitteleuropäische Pflanzenökologie hat ihre Wurzeln in der naturgeschichtlichen Tradition und war deshalb lange geprägt von einer mehr qualitativen beschreibenden Betrachtungsweise Die Dringlichkeit vieler Umweltprobleme erfordert zunehmend dass der Einfluss lokaler und globaler Umweltveränderungen oder die Folgen spezifischer Eingriffe auf die Vegetation voraus gesagt werden können Dazu ist eine quantitative analytische Betrachtungsweise notwendig Der populationsbiologische Ansatz berücksichtigt dass Vegetation aus Individuen besteht die bestimmte Beziehungen zueinander und zur unbelebten Umwelt aufweisen Die Populationsbiologie ermöglicht deshalb die Integration der mehrere meist getrennt behandelte hierarchische Stufen Organismus Population Lebensgemeinschaft Ökosystem und kann eine Verbindung zwischen den traditionellen Disziplinen der Ökophysiologie und der Vegetationskunde herstellen

Insect-Plant Biology Louis M. Schoonhoven, Joop J. A. van Loon, Marcel Dicke, 2005-12 Half of all insect species are dependent on living plant tissues consuming about 10% of plant annual production in natural habitats and an even greater percentage in agricultural systems despite sophisticated control measures Plants are generally remarkably well protected against insect attack with the result that most insects are highly specialized feeders The mechanisms underlying plant resistance to invading herbivores on the one side and insect food specialization on the other are the main subjects of this book For insects these include food plant selection and the complex sensory processes involved with their implications for learning and nutritional physiology as well as the endocrinological aspects of life cycle synchronization with host plant phenology In the case of plants exposed to insect herbivores they include the activation of defence systems in order to minimize damage as well as the emission of chemical signals that may attract natural enemies of the invading herbivores and may be exploited by neighbouring plants that mount defences as well Insect Plant Biology discusses the operation of these mechanisms at the molecular and organismal levels in the context of both ecological interactions and evolutionary

relationships In doing so it uncovers the highly intricate antagonistic and mutualistic interactions that have evolved between plants and insects The book concludes with a chapter on the application of our knowledge of insect plant interactions to agricultural production This multidisciplinary approach will appeal to students in agricultural entomology plant sciences ecology and indeed anyone interested in the principles underlying the relationships between the two largest groups of organisms on earth plants and insects
