The Oxford Handbook of Deaf Studies in Literacy Susan R. Easterbrooks, Hannah M. Dostal, 2020-11-02 The Oxford Handbook of Deaf Studies in Literacy brings together state of the art research on literacy learning among deaf and hard of hearing learners DHH With contributions from experts in the field this volume covers topics such as the importance of language and cognition phonological or orthographic awareness morphosyntactic and vocabulary understanding reading comprehension and classroom engagement written language and learning among challenged populations Avoiding sweeping generalizations about DHH readers that overlook varied experiences this volume takes a nuanced approach providing readers with the research to help DHH students gain competence in reading comprehension *Reading Comprehension*

Camille L. Z. Blachowicz, Donna Ogle, 2008-05-05 This practical resource and widely used text presents a wealth of research based approaches to comprehension instruction The authors offer specific classroom practices that help K 9 students compare and evaluate print and online sources develop vocabulary build study and test taking skills and become motivated readers Signs for Developing Reading Emil Holmer, 2016-05-23 Reading development is supported by strong language skills not least in deaf and hard of hearing DHH children The work in the present thesis investigates reading development in DHH children who use sign language attend Regional Special Needs Schools RSNS in Sweden and are learning to read The primary aim of the present work was to investigate whether the reading skills of these children can be improved via computerized sign language based literacy training Another aim was to investigate concurrent and longitudinal associations between skills in reading sign language and cognition in this population The results suggest that sign language based literacy training may support development of word reading In addition awareness and manipulation of the sub lexical structure of sign language seem to assist word reading and imitation of familiar signs i e vocabulary may be associated with developing reading comprehension The associations revealed between sign language skills and reading development support the notion that sign language skills provide a foundation for emerging reading skills in DHH signing children In addition the results also suggest that working memory and Theory of Mind ToM are related to reading comprehension in this population Furthermore the results indicate that sign language experience enhances the establishment of representations of manual gestures and that progression in ToM seems to be typical although delayed in RSNS pupils Working memory has a central role in integrating environmental stimuli and language mediated representations and thereby provides a platform for cross modal language processing and multimodal language development En god spr klig f r m ga bidrar till god l sutveckling inte minst hos d va och h rselskadade D H barn Studierna som ing r i avhandlingen unders ker l sutveckling hos D H elever som g r p teckenspr kiga specialskolor och som h ller p att l ra sig att l sa Arbetets huvudsakliga syfte var att unders ka om deras l sf r m ga kan f rb ttras via datoriserad teckenspr ksbaserad l str ning Ett annat syfte var att unders ka samtida och longitudinella samband mellan l sf r m ga teckenspr k och kognition i samma population Resultaten indikerar att teckenspr

ksbaserad i strömningsutveckling. Vidare pekar resultaten på att medvetenhet om och manipulation av teckenspråkets sublexikala struktur stöttar läsning och dessutom att imitation av kända tecken i ett vokabulär var associerat med utvecklingen av barnens läsning. Dessa fynd visar att teckenspråkskunskaper kan utgöra en grund för läsning hos teckenspråkiga elever. Resultaten indikerade även att arbetsminne och Theory of Mind (ToM) är relaterade till läsning i denna grupp. Vid sidan av resultaten rörande läsning framkom också att teckenspråksfärdigheter leder till starkare etablering av representationer av manuella gester och vidare att barnens mentaliseringsfärdigheter. Theory of Mind uppvisade en förväntad progression om inte försvagad. En implikation av detta är att insatser som stöttar utveckling av teckenbaserade representationer och deras användning vid bearbetning av skrivet språk kan främja läsning hos teckenspråkiga elever. Arbetsminne fungerar genom sin roll i integration mellan inkommande stimuli och språkmedierade representationer fungera som en plattform för modalitetsverskridande språkbearbetning och multimodal språkutveckling.

The Role of Working Memory and Executive Function in Communication under Adverse Conditions, Mary Rudner, Carine Signoret, 2016-06-20. Communication is vital for social participation. However, communication often takes place under suboptimal conditions. This makes communication harder and less reliable, leading at worst to social isolation. In order to promote participation, it is necessary to understand the mechanisms underlying communication in different situations. Human communication is often speech-based, either oral or written, but may also involve gesture, either accompanying speech or in the form of sign language. For communication to be achieved, a signal generated by one person has to be perceived by another person, attended to, comprehended, and responded to. This process may be hindered by adverse conditions, including factors that may be internal to the sender (e.g., incomplete or idiosyncratic language production) or occur during transmission (e.g., background noise or signal processing) or be internal to the receiver (e.g., poor grasp of the language or sensory impairment). The extent to which these factors interact to generate adverse conditions may differ across the lifespan. Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity, including efficient working memory and executive abilities such as

updating and inhibition Further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension To date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory It is likely that the episodic buffer plays a key role in communication under adverse conditions The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness

Communication Interventions with Deaf People ,2025-06-12 Communication Interventions with Deaf People concerns the application of spoken signed and written language interventions with deaf and hard of hearing children young people and adults Exploring the work that speech and language therapists pathologists deaf language specialists and other professionals carry out with deaf people this volume extends beyond the classroom and provides clinical and real life applications of learning and communication Historically communication interventions with deaf people have prioritised spoken language and considered it to be the most appropriate and normal accomplishment However this book begins with a deaf perspective on communication interventions where the multiple languages signed spoken and written of deaf people are valued equally and this paradigm shift is reflected throughout the various chapters With over forty contributors the research and professional experience of experts working with deaf people across national borders is presented Individual chapters describe the ways that services are delivered and detail different aspects of communication interventions presenting the current evidence base and indicating areas where further research is needed

Reading Comprehension Difficulties Cesare Cornoldi, Jane V. Oakhill, 2013-04-03 Recognizing the characteristics of children with learning disabilities and deciding how to help them is a problem faced by schools all over the world. Although some disorders are fairly easily recognizable, e.g., mental retardation, or very specific to single components of performance and quite rare, e.g.,

developmental dyscalculia schools must consider much larger populations of children with learning difficulties who cannot always be readily classified. These children present high level learning difficulties that affect their performance on a variety of school tasks but the underlying problem is often their difficulty in understanding written text. In many instances despite good intellectual abilities and a superficial ability to cope with written texts and to use language appropriately some children do not seem to grasp the most important elements or cannot find the pieces of information they are looking for. Sometimes these difficulties are not immediately detected by the teacher in the early school years. They may be hidden because the most obvious early indicators of reading progress in the teacher's eyes do not involve comprehension of written texts or because the first texts a child encounters are quite simple and reflect only the difficulty level of the oral messages: sentences, short stories etc. with which the child is already familiar. However as years go by and texts get more complex comprehension difficulties will become increasingly apparent and increasingly detrimental to effective school learning. In turn studying assimilating new information and many other situations requiring text comprehension from problem solving to reasoning with linguistic contents could be affected. Problems with decoding, dyslexia and language disorders have attracted more interest from researchers than have specific comprehension problems and have occupied more room in specialized journals. Normal reading comprehension has also been a favorite with researchers. However scarce interest has been paid to subjects who have comprehension difficulties. This book is an attempt to remedy this situation. In so doing this volume answers the following questions: Does a reading comprehension problem exist in schools? How important and widespread is the problem? Is the problem specific? How can a reading comprehension difficulty be defined and identified? Does the syndrome have a single pattern or can different subtypes be identified? What are the main characteristics associated with a reading comprehension difficulty? When can other well identified problems add to our understanding of reading comprehension difficulties? Which educational strategies are effective in preventing and treating reading comprehension difficulties? What supplementary information can we get from an international perspective?

The Oxford Handbook of Deaf Studies in Learning and Cognition Marc Marschark, Harry Knoors, 2020-04-15. In recent years the intersection of cognitive psychology, developmental psychology and neuroscience with regard to deaf individuals has received increasing attention from a variety of academic and educational audiences. Both research and pedagogy have addressed questions about whether deaf children learn in the same ways that hearing children learn, how signed languages and spoken languages might affect different aspects of cognition and cognitive development and the ways in which hearing loss influences how the brain processes and retains information. There are now a number of preliminary answers to these questions but there has been no single forum in which research into learning and

cognition is brought together The Oxford Handbook of Deaf Studies in Learning and Cognition aims to provide this shared forum focusing exclusively on learning cognition and cognitive development from theoretical psychological biological linguistic social emotional and educational perspectives Each chapter includes state of the art research conducted and reviewed by international experts in the area Drawing this research together this volume allows for a synergy of ideas that possesses the potential to move research theory and practice forward **Reading and Spelling** Charles Hulme,R.
