The rise of ChatGPT has stirred intense conversations in education raising concerns about the loss of traditional assessment methods. The increasing emphasis on examination based evaluations has gained attention leading educators to wrestle with the possible standardization of academic assessments. This one size fits all approach not only jeopardizes the authenticity of the learning experience but also neglects the diverse talents and strengths of students. The pressing challenge is to align the changing technological environment with the need for assessment strategies that are both inclusive and effective. *Cases on Authentic Assessment in Higher Education* is a publication that acknowledges the challenge posed by technological disruptions and actively seeks to provide a solution. It stands as a resource for educators and administrators navigating the complexities of contemporary assessment. By advocating for a shift towards authentic assessments, the book not only addresses the concerns raised by ChatGPT but also provides a wealth of practical examples across diverse subject areas. These examples serve as a guide for educators offering inspiration and adaptability to enhance their teaching methods and foster a more inclusive and engaging learning environment.

Phenomenology of Perception Carmelo Cali, 2017-03-06
Phenomenology of Perception Theories and Experimental Evidence reconstructs and reviews the phenomenological research of the Brentano School. Edgar Rubin, David Katz, Albert Michotte, and Gestalt psychology. Phenomenology is commonly considered a philosophy of subjective experience but this book presents it instead as a set of commitments for philosophy and science to discover the immanent grammar underlying the objective meaning of perception. Pioneering experimental results on the qualitative and quantitative structures of the perceptual world are collected to show that contrary to the received assumption, phenomenology can be embedded in standard science. This book will therefore be of interest not only to phenomenologists but also to anyone concerned with epistemological and empirical issues in contemporary psychology and the cognitive sciences.

Sillitoe, 2009 Technological capability has led through Euro American global domination to the muting of other cultural views and values even threatening their continued existence. There is a growing realization that the diversity of knowledge systems demand respect, some refer to them in a conservation idiom as alternative knowledge banks. The scientific perspective is only one. We now have many examples of the soundness of local science and practices some previously considered primitive and in

need of change However this book goes beyond demonstrating the soundness of local science and arguing for the incorporation of others knowledge in development to maintain that we need to look quizzically at the foundations of science itself and further challenge its hegemony not only over local communities in Africa Asia the Pacific and elsewhere but also the global community Publisher
