Del Casino Jr., Natalie Marie Gulsrud, Sarah Barns, 2023-10-18 Artificial intelligence AI is now mediating and in some cases seen to be controlling key urban services and infrastructures thus becoming a prominent feature of the contemporary city As portrayed in recent studies the autonomous city can be understood as a city where urban artificial intelligences perform tasks and take on roles which have traditionally been the domain of humans At stake in these debates are questions related to the meaning and ongoing role of intelligence for both humans and machines While autonomous cars transport people service robots run shops drones deliver goods and city brains govern entire cities humans are redefining the meaning of what smart means in the city and what role the human being may play in future urban spaces With humans shifted to new sectors of the economy or pushed aside by algorithms and robotic agents creating new ways of seeing and governing the city we raise the question as to whether or not cities are becoming more autonomous from human experience in the sense that their operation does not rely as much on human inputs anymore *China's Quest for Foreign Technology* William C. Hannas, Didi Kirsten Tatlow, 2020-09-22 This book analyzes China's foreign technology acquisition activity and how this has helped its rapid rise to superpower status Since 1949 China has operated a vast and unique system of foreign technology spotting and transfer aimed at accelerating civilian and military development reducing the cost of basic research and shoring up its power domestically and abroad without running the political risks borne by liberal societies as a basis for

their creative developments While discounted in some circles as derivative and consigned to perpetual catch up mode China's hybrid system of legal illegal and extralegal import of foreign technology combined with its indigenous efforts is the authors believe enormously effective and must be taken seriously Accordingly in this volume 17 international specialists combine their scholarship to portray the system's structure and functioning in heretofore unseen detail using primary Chinese sources to demonstrate the perniciousness of the problem in a manner not likely to be controverted The book concludes with a series of recommendations culled from the authors' interactions with experts worldwide This book will be of much interest to students of Chinese politics US foreign policy intelligence studies science and technology studies and International Relations in general
