Oracle Application Server 10g Erin Mulder, Rob Harrop, Jan Machacek, Michael Wessler, 2013-11-09 Oracle Application Server 10g J2EE Deployment and Administration focuses on the latest version of Oracle's fully J2EE certified application server previously called Oracle9iAS. Oracle Corporation is aggressively attacking this market with a new low cost version of the server as well as a program to move BEA customers onto Oracle free of charge. Adoption interest is growing rapidly amidst favorable reports regarding performance and reliability. Deploying and configuring J2EE applications are some of the trickiest processes in J2EE development and they unfortunately receive scant attention in general J2EE texts. This book is a focused no frills guide to getting J2EE applications up and running on 10g. It covers Oracle's J2EE container OC4J available free of charge for development purposes in full detail. It moves on to explain how to best configure and use the various enterprise level features that come with the commercial editions. This is the book for anyone wanting to stay ahead in the world of Oracle's application servers.

 together naturally As the first language designed from the bottom up with networking in mind Java makes it very easy for
 computers to cooperate Even the simplest applet running in a browser is a distributed application if you think about it The
 client running the browser downloads and executes code that is delivered by some other system But even this simple applet
 wouldn't be possible without Java's guarantees of portability and security the applet can run on any platform and can't
 sabotage its host Of course when we think of distributed computing we usually think of applications more complex than a
 client and server communicating with the same protocol We usually think in terms of programs that make remote procedure
 calls access remote databases and collaborate with others to produce a single result Java Distributed Computing discusses
 how to design and write such applications It covers Java's RMI Remote Method Invocation facility and CORBA but it doesn't
 stop there it tells you how to design your own protocols to build message passing systems and discusses how to use Java's
 security facilities how to write multithreaded servers and more It pays special attention to distributed data systems
 collaboration and applications that have high bandwidth requirements In the future distributed computing can only become
 more important Java Distributed Computing provides a broad introduction to the problems you'll face and the solutions you'll
