Sport and Exercise Nutrition Susan A. Lanham-New,Samantha Stear,Susan Shirreffs,Adam Collins,2011-08-10 Please note that digital editions do not include all the illustrations found in the printed book Now widely adopted on courses throughout the world the prestigious Nutrition Society Textbook series provides students with the scientific basics in nutrition in the context of a systems and disease approach rather than on a nutrient by nutrient basis In addition books provide a means to enable teachers and students to explore the core principles of nutrition and to apply these throughout their training to foster critical thinking at all times This NS Textbook on Sport and Exercise Nutrition has been written to cover the latest information on the science and practice of sport and exercise nutrition A key concept behind this textbook is that it aims to combine the viewpoints of world leading nutrition experts from both academia research and a practical stand point Plus where necessary there are additional practitioner based authors to ensure theory is translated into practice for each chapter in the form of either practice tips or information sheets at the end of relevant chapters The textbook in essence can be divided into three distinct but integrated parts Part 1 covers the key components of the science that supports the practice of sport and exercise nutrition including comprehensive reviews on nutrients both in general and as exercise fuels

exercise physiology hydration micronutrients and supplements Part 2 moves into focusing on specific nutrition strategies to support different types of training including resistance power sprint middle distance speed endurance endurance technical skill team and specific competition nutrition needs The unique format of this textbook is that it breaks down nutrition support into training specific as opposed to the traditional sport specific support This reflects the majority of current sport and exercise requirements of the need to undertake concurrent training and therefore facilitating targeted nutrition support to the different training components through the various macro and micro training cycles Part 3 explores some of the practical issues encountered in working in the sport and exercise nutrition field and includes key sport related topics such as disability sport weight management eating disorders bone and gut health immunity injury travel and special populations and situations
