**Can that be Right?** A. Franklin, 2012-12-06 In this collection of essays Allan Franklin defends the view that science provides us with knowledge about the world which is based on experimental evidence and on reasoned and critical discussion. In short he argues that science is a reasonable enterprise. He begins with detailed studies of four episodes from the history of modern physics: 1 the early attempts to detect gravity waves 2 how the physics community decided that a proposed new elementary particle 17 keV neutrino did not exist 3 a sequence of experiments on K meson decay and 4 the origins of the Fifth Force hypothesis a proposed modification of Newton's Law of Universal Gravitation. The case studies are then used to examine issues such as how discord between experimental results is resolved calibration of an experimental apparatus and its legitimate use in validating an experimental result and how experimental results provide reasonable grounds for belief in both the truth of physical theories and in the existence of the entities involved in those theories. This book is a challenge to the critics of science both postmodern and constructivist to provide convincing alternative explanations of the episodes and issues discussed. It should be of interest to philosophers historians and sociologists of science and to scientists themselves.

**Experimental Political Science and the Study of Causality** Rebecca B. Morton, Kenneth C. Williams, 2010-08-06 Increasingly political scientists use the term experiment or experimental to describe their empirical research. One of the primary reasons for doing so is the advantage of experiments in establishing causal inferences. In this book Rebecca B. Morton and Kenneth C. Williams discuss in detail how experiments and experimental reasoning with observational data can help researchers determine causality. They explore how control and random assignment mechanisms work examining both the Rubin causal model and the formal theory approaches to causality. They also cover general topics in experimentation such as the history of experimentation in political science internal and external validity of experimental research types of experiments field laboratory virtual and survey and how to choose recruit and motivate subjects in experiments. They investigate ethical issues in experimentation the process of securing approval from institutional review boards for human subject research and the use of deception in experimentation. *Catalog of Federal Domestic Assistance*, 1991 Identifies and describes specific government assistance opportunities such as loans grants counseling and procurement contracts available under many agencies and programs.
