general digital technology applications have yet to impact education in a significant way that transforms learning. A primary reason for this minimal impact on learning is that digital technologies have attempted to make traditional instructional processes more efficient rather than using a more appropriate paradigm for learning. As such, it is important to look at digital technology as a partner and use transformative applications to become partners with students, not teachers, to empower their learning process both in and out of school. The Handbook of Research on Transformative and Innovative Pedagogies in Education is a comprehensive reference that identifies and justifies the paradigm of transformative learning and pedagogies in education. It provides exemplars of existing transformative applications that if used as partners to empower student learning have the potential to dramatically engage students in a type of learning that better fits 21st century learners. Covering topics such as gamification, project based learning, and professional development, this major reference work is an essential resource for pre-service and in-service teachers, educational technologists, instructional designers, educational administration, and faculty researchers and academicians seeking pedagogical models that inspire students to learn meaningfully.
