Lifestyle Interventions to Therapies Evelyn Frias-Toral, Jorge Carriel-Mancilla, Florencia Ceriani, Almino Ramos, 2025-02-21

We are currently facing an obesity pandemic that affects individuals of all age groups geographic areas and social status among others Thus it is essential to generate high quality scientific evidence to better understand this pathology its risk factors and its treatments Several modifiable and non modifiable risk factors for the development of obesity have been identified It has been demonstrated that obese patients have an increased risk of acquiring arterial hypertension diabetes dyslipidemia cardiovascular diseases cancer and other chronic conditions In order to take efficient actions to reverse or prevent these complications it is also crucial to delve into body composition lean mass fat bone mass and sarcopenia in patients with obesity In recent months there have been developments in pharmacological therapies using GLP 1 GIP and glucagon agonists which seem to change the rules of the game regarding therapeutic decision making in these patients worldwide However surgical techniques such as sleeve gastrectomy and Roux en Y gastric bypass continue to be the most effective and definitive interventions to achieve adequate weight loss in patients with obesity Despite the pharmacological development none of the clinical trials have shown that the operated patients reach more than 30% of the total body weight as with bariatric surgery techniques Furthermore it is fundamental to analyze the impact of diverse therapeutic non surgical and non pharmacological options to address obesity such as cognitive behavioral interventions and different types of diets in combination with physical activity Maternal-Fetal and Neonatal Endocrinology Christopher S. The Micronutrient Miracle Jayson Calton, Mira Calton, 2015-08-11 Our poor health and growing waistlines can be traced back to the hidden crisis of a micronutrient deficiency. More than 90 percent of all Americans are deficient in at least one of these health-promoting vitamins and minerals and don't even know it. According to nutritionists Jayson and Mira Calton, micronutrients (vitamins and minerals) essential for optimum health are being stripped from our diet and depleted by our lifestyle habits. And these deficiencies cause today's most common illnesses. Mira herself developed advanced osteoporosis at the age of 30. But with Jayson's help, she reversed her disease through micronutrient therapy. The Caltons created The Micronutrient Miracle, an incredible cure-all program to help you lose weight and prevent and reverse common disorders including obesity, heart disease, and diabetes. The Micronutrient Miracle explains the truth about what you're really eating and how your habits may be depleting essential micronutrients. It also provides an easy-to-follow 28-day plan to reverse these effects by restoring your depleted micronutrients. And the best part: This book is tailor-made to work with your lifestyle, including gluten-free, low-carb, low-fat, vegan, and Paleo recipes.
