The Case against Education Bryan Caplan,2018-01-30 Why we need to stop wasting public funds on education Despite being immensely popular and immensely lucrative education is grossly overrated In this explosive book Bryan Caplan argues that the primary function of education is not to enhance students skill but to certify their intelligence work ethic and conformity in other words to signal the qualities of a good employee Learn why students hunt for easy As and casually forget most of what they learn after the final exam why decades of growing access to education have not resulted in better jobs for the average worker but instead in runaway credential inflation how employers reward workers for costly schooling they rarely if ever use and why cutting education spending is the best remedy Caplan draws on the latest social science to show how the labor market values grades over knowledge and why the more education your rivals have the more you need to impress employers

He explains why graduation is our society's top conformity signal and why even the most useless degrees can certify employability. He advocates two major policy responses. The first is educational austerity. Government needs to sharply cut education funding to curb this wasteful rat race. The second is more vocational education because practical skills are more socially valuable than teaching students how to outshine their peers. Romantic notions about education being good for the soul must yield to careful research and common sense. The Case against Education points the way. *Psychology in Learning and Instruction* Patricia A. Alexander, 2006. This book introduces future educators and researchers to several different psychological perspectives and uses these perspectives to introduce key issues such as knowledge acquisition and transfer, strategic process, and student motivation. As an editor and reviewer of the top journals in the field, the author is able to present the latest research in language that is accessible and understandable. Unlike other books that are organized around theoretical topics valued by psychologists, it is organized around education problems and issues deemed important by educators.
