molecular genetic techniques useful in the analysis of genetic disease and genetic testing Subsequent chapters examine major neurologic disorders caused by single defects as well as disease phenotypes such as Alzheimer disease or amyotrophic lateral sclerosis which may be caused by defects in single genes but may also be seen as sporadic diseases The genetic components of other common neurologic disorders such as epilepsy multiple sclerosis migraine and stroke are all covered in detail The final chapter discusses genetic counseling of symptomatic and pre symptomatic individuals Throughout chapters discuss genotype phenotype correlations and where appropriate animal models for inherited human neurologic diseases Several chapters are devoted to recently discovered diseases caused by unstable DNA repeats Special emphasis is placed on conveying how DNA testing can be applied to the daily practice of geneticists and neurologists

Neurologic Rehabilitation Bruce H. Dobkin, 2003 The Second Edition of this single authored volume integrates multiple disciplines of basic and clinical research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases From the readable descriptions of the structures and functions of pathways for movement and cognition the reader comes to understand the potential for training induced pharmacologic and near future biologic interventions to enhance recovery Dr Dobkin shows how functional neuroimaging serves as a marker for whether physical cognitive and neuromodulating therapies work and how they sculpt the plasticity of the brain Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text built from the level of the synapse to behaviors such as grasping walking and thinking From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways Dr Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they can translate into bedside practices The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix The management of common medical issues impairments and disabilities are described across diseases Special problems posed by patients with stroke myelopathies brain injury multiple sclerosis degenerative diseases and motor unit disorders receive individual comment Short term and delayed pulse interventions for patients along with clinical trials are dissected and put into perspective The First Edition of this book was titled *Neurologic Rehabilitation* The title has been changed to reflect Dr Dobkin's sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters Readers whether clinicians serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients
