Cyber Persistence Theory Michael P. Fischerkeller, Emily O. Goldman, Richard J. Harknett, 2022 A bold re conceptualization of the fundamentals driving behavior and dynamics in cyberspace Most cyber operations and campaigns fall short of activities that states would regard as armed conflict In *Cyber Persistence Theory* Michael P Fischerkeller Emily O Goldman and Richard J Harknett argue that a failure to understand this strategic competitive space has led many states to misapply the logic and strategies of coercion and conflict to this environment and thus suffer strategic loss as a result The authors show how the paradigm of deterrence theory can neither explain nor manage the preponderance of state cyber activity They present a new theory that illuminates the exploitive rather than coercive dynamics of cyber competition and an analytical framework that can serve as the basis for new strategies of persistence Drawing on their policy experience they offer a new set of prescriptions to guide policymakers toward a more stable secure cyberspace

Laboratory Manual for Pulse-Width Modulated DC-DC Power Converters Marian K. Kazimierczuk, Agasthya Ayachit, 2015-08-13 Designed to complement a range of power electronics study resources this unique lab manual helps students to gain a deep understanding of the operation modeling analysis design and performance of pulse width modulated PWM DC DC power converters Exercises focus on three essential areas of power electronics open loop power stages small signal modeling design of feedback loops and PWM DC DC converter control schemes and semiconductor devices such as silicon silicon carbide and gallium nitride Meeting the standards required by industrial employers the lab manual combines programming language with a simulation tool designed for proficiency in the theoretical and practical concepts Students and instructors can choose from an extensive list of topics involving simulations on MATLAB

SABER or SPICE based platforms enabling readers to gain the most out of the prelab inlab and postlab activities The laboratory exercises have been taught and continuously improved for over 25 years by Marian K Kazimierczuk thanks to constructive student feedback and valuable suggestions on possible workroom improvements This up to date and informative teaching material is now available for the benefit of a wide audience Key features Includes complete designs to give students a quick overview of the converters their characteristics and fundamental analysis of operation Compatible with any programming tool MATLAB Mathematica or Maple and any circuit simulation tool PSpice LTSpice Synopsys SABER PLECS etc Quick design section enables students and instructors to verify their design methodology for instant simulations Presents lab exercises based on the most recent advancements in power electronics including multiple output power converters modeling current and voltage mode control schemes and power semiconductor devices Provides comprehensive appendices to aid basic understanding of the fundamental circuits programming and simulation tools Contains a quick component selection list of power MOSFETs and diodes together with their ratings important specifications and Spice models

Applied Computer Science for GGOS Observatories Alexander N.J. Neidhardt, 2017-08-08 This book combines elementary theory from computer science with real world challenges in global geodetic observation based on examples from the Geodetic Observatory Wettzell Germany It starts with a step by step introduction to developing stable and safe scientific software to run successful software projects The use of software toolboxes is another essential aspect that leads to the application of generative programming An example is a generative network middleware that simplifies communication One of the book's main focuses is on explaining a potential strategy involving autonomous production cells for space geodetic techniques The complete software design of a satellite laser ranging system is taken as an example Such automated systems are then combined for global interaction using secure communication tunnels for remote access The network of radio telescopes is used as a reference Combined observatories form coordinated multi agent systems and offer solutions for operational aspects of the Global Geodetic Observing System GGOS with regard to Industry 4.0

Fahmy,2016-03-02 This book focuses on the principles of wireless sensor networks WSNs their applications and their analysis tools with meticulous attention paid to definitions and terminology This book presents the adopted technologies and their manufacturers in detail making WSNs tangible for the reader In introductory computer networking books chapter sequencing follows the bottom up or top down architecture of the 7 layer protocol This book addresses subsequent steps in this process both horizontally and vertically thus fostering a clearer and deeper understanding through chapters that elaborate on WSN concepts and issues With such depth this book is intended for a wide audience it is meant to be a helper and motivator for senior undergraduates postgraduates researchers and practitioners It lays out important concepts and WSN relate applications uses appropriate literature to back research and practical issues and focuses on new trends Senior undergraduate students can use it to familiarize themselves with conceptual foundations and practical project implementations For graduate students and researchers test beds and simulators provide vital insights into analysis methods and tools for WSNs Lastly in addition to applications and deployment practitioners will be able to learn more about WSN manufacturers and components within several platforms and test beds **The Fundamentals of Scientific Research**

Marcy A. Kelly,2015-09-15 The Fundamentals of Scientific Research An Introductory Laboratory Manual is a laboratory manual geared towards first semester undergraduates enrolled in general biology courses focusing on cell biology This laboratory curriculum centers on studying a single organism throughout the entire semester *Serratia marcescens* or *S marcescens* a bacterium unique in its production of the red pigment prodigiosin The manual separates the laboratory course into two separate modules The first module familiarizes students with the organism and lab equipment by performing growth curves Lowry protein assays quantifying prodigiosin and ATP production and by performing complementation studies to understand the biochemical pathway responsible for prodigiosin production Students learn to use Microsoft Excel to prepare and present data in graphical format and how to calculate their data into meaningful numbers that can be compared across experiments The second module requires that the students employ UV mutagenesis to generate hyper pigmented mutants of *S marcescens* for further characterization Students use experimental data and protocols learned in the first module to help them develop their own hypotheses experimental protocols and to analyze their own data Before each lab students are

required to answer questions designed to probe their understanding of required pre laboratory reading materials Questions also guide the students through the development of hypotheses and predictions Following each laboratory students then answer a series of post laboratory questions to guide them through the presentation and analysis of their data and how to place their data into the context of primary literature Students are also asked to review their initial hypotheses and predictions to determine if their conclusions are supportive A formal laboratory report is also to be completed after each module in a format similar to that of primary scientific literature The Fundamentals of Scientific Research An Introductory Laboratory Manual is an invaluable resource to undergraduates majoring in the life sciences
