Inventorying Cultural Heritage Collections Sandra Vanderwarf, Bethany Romanowski, 2022-03-14 This two part text opens with an argument few collections practitioners would contest Regular inventories are central to meaningful sustainable and ethical collections preservation and access But Vanderwarf and Romanowski argue that in practice some 25 years working with diverse collections between them inventories are uncommon instead of functioning as a commonplace feature of collections care they tend to be evoked as a last resort when a museum has lost control of its collection Part I offers a flexible project management framework that illustrates strategies for reining in control of collections now From identifying objectives that best serve the collection in question to securing stakeholder support and planning time and resources Part I eliminates some guesswork around what may be an unprecedented and intensive project To maintain the benefits of a project style inventory the authors then encourage practitioners to embrace inventory as an ongoing evolving collections care function that reflects changing professional values and expectations from the communities museums serve By centering computerized databases barcoding and digital collections the authors further acknowledge these technologies as permanent evolving features of collections and inventory practice that merit increased resourcing Part II gives voice to practitioners around the world through case studies that affirm the vital role of inventories

in regaining control of collections Some of these inventories occurred during the course of everyday work while others were responses to natural disasters and armed conflict Still others may be seen as expressions of social justice As much as the authors offer a guide to performing inventories thereby filling a longstanding gap in the literature they invite cultural heritage institutions to rethink how the stories held in collections can be better told and preserved through enhanced inventory practice The book will benefit seasoned museum collections practitioners as well as those who lack access to formal museology education and training The book targets stewards of cultural heritage and material culture collections with varying resources

Water Management Challenges in Global Change B. Ulanicki, Kalanithy Vairavamoorthy, David Butler, Peter L. M. Bounds, Fayyaz Ali Memon, 2020-11-26 *Water Management Challenges in Global Change* contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computer-based methods. Issues such as economic globalisation, climate changes, and water shortages call for a new approach to water systems management which addresses the relevant technical, social, and economic aspects. This collection represents the views of academic and industrial experts from a number of countries who provide technical solutions to current water management problems and present a

vision for addressing the global questions The themes underlying many of the contributions include energy and material savings water savings and the integration of different aspects of water management The papers are grouped into three themes covering water distribution systems sustainable urban water management and modelling of wastewater treatment plants The water distribution topics cover asset and information management planning monitoring and control hydraulic modelling of steady state and transients water quality and treatment demand and leakage management optimisation design and decision support systems as well as reliability and security of water distribution systems The sustainable urban water management topics include urban drainage systems water reuse social aspects of water management and also selected facets of water resources and irrigation Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems To address this imbalance this book presents a number of modelling techniques developed specifically for these plants Water Management Challenges in Global Change will prove to be invaluable to water and environmental engineering researchers and academics managers engineers and planners and postgraduate students **Entrepreneurship**
