systems pervasive system ubiquitous system E learning and teaching knowledge based paradigms learning paradigms intelligent data analysis intelligent decision making and support system intelligent network security web intelligence deep learning natural language processing image processing general machine learning and unsupervised learning *Integrated System-Level Modeling of Network-on-Chip enabled Multi-Processor Platforms* Tim Kogel, Rainer Leupers, Heinrich Meyr, 2006-08-25 We are presently observing a paradigm change in designing complex SoC as it occurs roughly every twelve years due to the exponentially increasing number of transistors on a chip This design discontinuity as all previous ones is characterized by a move to a higher level of abstraction This is required to cope with the rapidly increasing design costs While the present paradigm change shares the move to a higher level of abstraction with all previous ones there exists also a key difference For the first time shrinking geometries do not lead to a corresponding increase of performance In a recent talk Lisa Su of IBM pointed out that in 65nm technology only about 25% of performance increase can be attributed to scaling geometries while the lion share is due to innovative processor architecture 1 We believe that this fact will revolutionize the entire semiconductor industry What is the reason for the end of the traditional view of Moore's law It is instructive to look at the major drivers of the semiconductor industry wireless communications and multimedia Both areas are characterized by a rapidly increasing demand of computational power in order to process the sophisticated algorithms necessary to optimally utilize the precious resource bandwidth The computational power cannot be provided by traditional processor architectures and shared bus type of interconnects The simple reason for this fact is energy efficiency there exist orders of magnitude between the energy efficiency of an algorithm implemented as a fixed functionality computational element and of a software implementation on a processor
