Technology Stephen Emmitt, 2012-05-07 Since the publication of the first edition of Architectural Technology in 2002 there have been significant developments in the number of courses the profile of the discipline as well as significant changes in the Construction sector The Second edition of Architectural Technology addresses these challenges directly Much greater emphasis is given to the three core themes of the book Environmental Sustainability Innovation and Design An increase in the visual material included reinforces the critical role of Design aiding students to better translate conceptual designs into built artefacts Building upon solid teaching practice from the previous edition Architectural Technology is now more concisely structured to take the reader through the whole life cycle of a building emphasising sustainability and building performance Material on digital information building information modelling BIM and information communication technologies has been updated Most chapters have been re titled to emphasise the importance of design and make the book more accessible to a wider range of students Chapters conclude with updated more extensive links to further reading Architectural Technology 2nd Edition Bridges the knowledge gap between design and construction Tackles the core subjects of management technologies and design from a sustainable building angle Addresses the buildability and performance of a design from a whole life perspective Thoroughly revised and updated this undergraduate level textbook is essential for Architectural Technology courses Students studying Architectural Engineering Architecture Building Surveying and more general Construction courses will find the material invaluable **Responsible Pedagogies in Architecture** Madhura

Yadav, 2023-08-24 Higher education plays a significant role in developing innovative ways to combat climate change particularly through curriculum research and training This book highlights that through its research teaching and community outreach the School of Architecture and Design of Manipal University Jaipur India is consistently pursuing responsible pedagogies in environmental economic and social sustainability all of which speak to the urgent premise of addressing climate change An Architecture of Parts: Architects, Building Workers and Industrialisation in Britain 1940 - 1970

Christine Wall, 2013-07-04 This book is unique in describing the history of post war reconstruction from an entirely new perspective by focusing on the changing relationship between architects and building workers It considers individual as well as collective interactions with technical change and in doing so brings together for the first time an extraordinary range of sources including technical archives oral history and visual material to describe the construction process both during and in the decades after the war It focuses on the social aspects of production and the changes in working life for architects and building workers with increasing industrialization in particular analysing the effect on the building process of introducing dimensionally co ordinated components Both architects and building workers have been accused of creating a built

environment now popularly discredited architects responsible for poor design and building workers for poor workmanship. However many of the structures and ideas underpinning this period of rapid change were revolutionary in their commitment to a complete transformation of the building process. An Architecture of Parts adds to the growing literature on changes in the building world during and immediately after the Second World War. It is significant both empirically and historically in its examination of the ideas, technology and relationships that fired industrialization of the building process in mid century Britain.

Churches and Chapels Martin Purdy, 2014-05-15 Churches and Chapels: A Design and Development Guide is a reference for structure approach to design, development or alteration of a building. The book deals with designing or altering traditional Western congregational halls and places of worship through a harmonious rendering of religious worship and social action. Part I of the book focuses on background, presenting general ideas and influences that made today's churches. Questions such as adapt or replace and concerns about design are addressed. This part also examines the role of today's clients and the possible types of churches and chapels that will prove desirable and satisfactory. Part II discusses the design process, covering the need for a feasibility study and agreed design development. The feasibility study addresses retention of parts of the structure, size of the structure, costs and consideration of other building designs. Design analysis involves evaluation of the architectural considerations that include Western congregational halls design ideas, check ups and sketching. The details of the scheme design contain precise information that will serve as basis for the client to modify or accept and for the authorities to approve. Throughout this book case studies that are relevant for each topic are also given. This guide is useful for administration of local parochial and district congregations. This book can likewise be appreciated by architects and structural engineers.

Design-Tech: Building Science for Architects Jason Alread, Thomas Leslie, Rob Whitehead, 2025-03-19 The third edition of Design Tech provides an indispensable holistic resource for integrating building technologies into critically designed performance based architectural projects. The book's format follows the developmental stages of a typical architectural project; it provides a step by step process for addressing and integrating building sciences from first principles of human comfort, materials, structures and environmental systems to advanced construction systems and measures of building performance. Short chapters incorporate easy to understand information with hundreds of useful illustrations, tables and references that explain the why as well as the how of building science. The content focuses on what designers need to know in the studio to create sustainably designed integrated buildings and it prepares them for future discussions with engineers, contractors and consultants. The updated format builds a coherent framework for integrated project design studio development necessary for all contemporary accredited schools of architecture. Chapters build upon critical project information from schematics toward technical integration. New chapters emphasize performance based design strategies including sustainable design values, critical schematic planning, enhanced building envelope design strategies and advanced performance systems. Enhanced visualization of schematic design strategies helps explain sustainable design.

standards code compliance and structural schematics and throughout the third edition focuses on contemporary issues such as embodied carbon heavy timber construction life cycle costs and long term performance This will be a must read for all architecture students looking for an accessible guide to building science *Better by Design* Ayub Khan, 2009 Libraries today are faced with rapidly shifting populations of users with differing needs who require a range of new communications links that are transforming our concept of the library space This developing role has created a set of new and complex challenges for those delivering library services There is no such thing as the perfect library building However a well designed building will enable a project both to gain local acceptance more easily and to ease the process of securing planning permission It also needs to be cost effective to run support the organization's objectives well offer an improved service to the user and make an impact on the community This much needed book takes as its starting point the fact that few architects know very much about libraries and fewer librarians know about architectural planning and designing It steers a clear path for library managers through the language and processes that they need to understand as members of a team overseeing the planning of a new library building project major refurbishment or remodelling of an existing library Key topics include twenty first century libraries developing a business case project management the design project team selecting an architect partnership and community engagement the design brief design quality space planning and access occupancy and post occupancy evaluation building libraries for the future Appendices offer top tips and checklists together with a glossary of common terms used within the construction environment to help further demystify the design process for librarians Readership This practical and accessible book is an invaluable guide not only for new entrants to the library profession but also for experienced practitioners who are approaching for the first time the important task of creating a new library or major refurbishment of existing facilities It will also be of great relevance to architects unfamiliar with library building requirements
