Neurobehavior Of Language And Cognition Neurobehavior Of Language And Cognition:

Neurobehavior of Language and Cognition Lisa Tabor Connor, Loraine K. Obler, 2007-05-08 This volume has been composed as an appreciation of Martin L. Albert in the year of his 60th birthday. At least one contributor to each paper in this volume has been touched by Marty in some way: he has mentored some, been a fellow student with some, and been a colleague to most. These contributors, as well as many others, view Marty as a gifted scientist and a wonderful human being. The breadth of his interests and intellectual pursuits is truly impressive; this breadth is reflected only in part by the diversity of the papers in this volume. His interests have ranged from psychopharmacology to cross-cultural understanding of dementia, through the aphasia to the history of the fields that touch on behavioral neurology, especially neurology per se, cognitive psychology, speech language pathology, and linguistics. Throughout his scholarly work, Martha Taylor Sarno notes, Marty never loses the human perspective, e.g., the powerfully disabling effect on the individual person with aphasia or other neurological disorder. For those readers who only know a portion of his work, we thought that we should describe him here. Many of the people whom Marty has influenced have been able to contribute to this volume. We have invited some others who were unable to contribute to express their appreciation for him as well.

Neurobehavior of Language and Cognition Martin L. Albert, Lisa Tabor Connor, Loraine K. Obler, 2000-07-31 The intersection of neurolinguistics and neuropsychology lies at the core of the cognitive neurosciences. Recent advances in our understanding of how language and other cognitive abilities relate to each other and to the brain have complemented the prior research on brain damage in the aphasia. The editors have invited senior scholars in the field to present a state-of-the-art volume on a range of language and non-language cognitive phenomena in normals and in brain damage from the perspective of neurobehavior, including neurochemistry. This volume should appeal to neuropsychologists, speech language pathologists, behavioral neurologists, and neuropsychiatrists.

Albers, 2010-10-18 This is the final volume in a three volume work that has addressed the scientific methodologies relevant to clinical neurobehavioral toxicology Volume I focused on basic concepts and methodologies in Neurobehavioral Toxicology with Volume II focusing on the peripheral nervous system Volume III attends to what is known about industrial and environmental chemicals medicines and substances of abuse and how these agents affect the central nervous system All substances have the capacity to be toxic depending on factors that include the physical properties of the chemical or compound organism related variables or interaction between the two These substances on the other hand and as a result of these same factors might be used therapeutically or even recreationally The difference between medicine recreational drug or poison depends often on a careful balance between adverse and intended effects How to determine that a specified substance has caused harm is

emphasized in the present volume by way of case examples and discussion. Illnesses and behavioral variations that compete with toxicant induced explanations for findings in a given case as well as the various controversies that can arise around issues of diagnosis and causal determination are treated comprehensively in this volume. Introduction to Neurobehavioral Toxicology Hugh A. Tilson, R.M.A. Jaspers, L.M.W. Kornet, J.M. van Ree, 1998-11-25. Introduction to Neurobehavioral Toxicology Food and Environment examines the effects of chemicals on the central and peripheral nervous system and the subsequent changes in behavior with a focus on the toxicity of food components and behavioral effects of environmental toxicants. Topics addressed include acute and chronic effects, reversible and **Developmental Behavioral Neuroscience** Megan R. Gunnar, Charles A. Nelson, 2013-04-15. This volume provides an introduction to current research on the relation between brain development and the development of cognitive, linguistic, motor and emotional behavior. At least two audiences will benefit from this book: psychologists interested in brain development and neuroscientists interested in behavioral development. Although each chapter is content oriented, the volume as a whole provides a well integrated summary of the latest findings from developmental behavioral neuroscience. **Advances in Diagnosis and Treatment of TBI-Induced Neurodegeneration and Cognitive Deficits** Guoqiang Xing, John Wesson Ashford, Yu Zhang, Yumin Zhang, Maheen Mausoo Adamson, Ansgar J. This book brings together experts in developmental and clinical psychology and behavioral neuroscientists concerned with the course of development in the face of pre and perinatal adversity. For graduate level researchers and academics. **Neurobehavioral Disorders of Childhood** Robert Melillo, Gerry Leisman, 2010-01-08. Attention deficit disorder, attention deficit hyperactive disorder, pervasive developmental disorder, obsessive compulsive disorder, asperger's syndrome and autism to name but a few may be viewed as points on a spectrum of developmental disabilities in which those points share features in common and possibly etiology as well as varying only in severity and in the primary anatomical region of dysfunctional activity. This text focuses on alterations of the normal development of the child. A working theory is presented based on what we know of the neurological and cognitive development in the context of evolution of the human species and its brain. In outlining our theory of developmental disabilities in evolutionary terms, the authors offer evidence to support the following notions: Bipedalism was the major reason for human neocortical evolution. Cognition evolved secondary and parallel to evolution of motricity. There exists an overlap of cognitive and motor symptoms. Lack of thalamo cortical stimulation, not overstimulation, is a fundamental problem of developmental disabilities. A primary problem is dysfunctions of hemisphericity. Most conditions in this spectrum of disorders are the result of a right hemisphericity. Environment is a fundamental problem. All of these conditions are variations of the same problem. These problems are correctable. Hemisphere specific treatment is the key to success. Aging and Older

Adulthood Joan T. Erber, 2005 Filled with examples that reflect the diversity of the world we live in Erber's accessible yet science based book focuses on research and theory that add to our understanding of aging and older adulthood Erber organizes the book around complementary big point of view theories that focus on successful aging and successful adaptation such as selective optimization with compensation as well as on those that emphasize matching the person's competencies with demands of the environment such as the ecological model To ensure that students acquire a big picture understanding of the theory's application Erber closes each chapter with a discussion of these theoretical models *Neurobehavioral Recovery from Head Injury* Harvey S. Levin, 1987 This volume will repay the reader with a greatly enhanced understanding of the challenge facing head injured patients when they try to return to society The Lancet
