that the CompTIA Network exams try to reflect the hardware and software that a technical support professional is likely to see in real life and that's part of its relevance and appeal. In a nutshell, the Network certification is the preferred performance-based qualifying credential for technical support and IT operational roles according to the organization that manages it. CompTIA The Network certification focuses on the day-to-day work of an IT technician in a business environment. One reason the Network certification receives respect by IT employers is that it is accredited by international organizations. The ISO or International Standards Organization is a worldwide standard setting group headquartered in Geneva, and ANSI the American National Standards Institute is the USA's representative to ISO. CompTIA has been accredited by ANSI for compliance with the ISO standard that applies to operating a certification body or organization, and CompTIA must maintain certain quality levels in order to maintain that accreditation. That's a bit of background on CompTIA and the Network certification. But who might benefit from this credential? Well, anyone wanting to be hired on by a company that requires it, certainly, but more broadly, anybody pursuing a career in tech support, for example, as a help desk analyst, service desk analyst, or a desktop support technician. Field service techs will also find the credential helpful, as will those who aspire to being a network engineer or a documentation specialist in IT.
