Neural Plasticity Across Lifespan Change:

Neural Plasticity Across the Lifespan Gianfranco Denes, 2015-12-14 Neural Plasticity Across the Lifespan reviews the recent scientific developments which are transforming our understanding of the human brain. For many years it was thought that modifications to the structural and functional organization of the brain were limited to a short early period of life, the critical period, and in adults to the memory system. Recent research suggests that on the contrary we should see the human brain as a flexible structure which adapts and modifies in response to learning, sensory experience, age, and disease. The book provides an integrated overview of contemporary research on neural plasticity, the process by which the brain can change in structure and function to cope with new experiences and react to the effects of acquired damage or sensory deprivation. It reviews data on plasticity in the developing brain, looking at both typical and atypical development, alongside clinical and observational research on the adult population. It covers a number of key topics including different forms of neural plasticity, factors affecting neural plasticity, ageing, and gender, neural plasticity in language acquisition, memory, and bodily self-consciousness, mechanisms of repair, plasticity following sensory deprivation and acquired brain damage. This is an accessible overview of an emerging field of research which has fundamental implications for how we perceive our potential to change throughout our lives. It will be essential reading for all students of cognitive development, cognitive neuroscience, and lifespan development. Changing Brains, 2013-12-03 This volume of Progress in Brain Research focuses on the applying brain plasticity to advance and recover human ability. The volume starts off discussing brain plasticity in the young adults and old brains, with follow-on discussions regarding the type of neuroscience-based training that is on offer in impaired child populations, as well as discussing the therapeutics involved in adults. Applying brain plasticity and advances and recover human ability.

Die Psychologie des Schweinehunds Daniela Bernhardt, 2021-03-29 Studieren verlangt viel Eigenmotivation und ein gutes Selbstmanagement. Doch der innere Schweinehund lauert in jedem und zerkaut genusslich die guten Vorsätze. Das Buch erläutert anhand aktueller Befunde und aus der motivations-, kognitions- und sozialpsychologischen Forschung, warum es manchmal schwerfällt, gefasste Vorsätze in die Tat umzusetzen. Daraus folgen konkrete Empfehlungen, wie man den inneren Schweinehund in allen Handlungsphasen, von der Intentionsbildung bis zur Zielerreichung, an die Leine bekommt. Studierende finden Unterstützung dabei, sich kurzfristig in 6 Schritten zur Erledigung dringender Aufgaben zu motivieren. Darüber hinaus zeigt der Ratgeber aber vor allem, wie sich fürderliche Denkweisen und Gewohnheiten langfristig verankern lassen, um Studium, Berufseinstieg und alle weiteren Herausforderungen des Lebens gesund und gelassen zu meistern. Lifespan Development and the Brain Paul B. Baltes,Patricia A. Reuter-Lorenz,Frank Rösler,2006-06-19 The book focuses on the developmental analysis of the brain culture environment dynamic and argues that this dynamic is interactive and reciprocal Brain and culture co determine each other As a whole this book refutes any unidirectional conception of the brain culture dynamic Each is influenced by and modifies the other To capture the ubiquitous reach and significance of the mutually dependent brain culture system the metaphor of biocultural co constructivism is invoked Distinguished researchers from cognitive neuroscience cognitive psychology and developmental psychology review the evidence in their respective fields A special focus of the book is its coverage of the entire human lifespan from infancy to old age

Cultural Neuroscience: Cultural Influences on Brain Function Juan Y. Chiao,2009-11-25 This volume presents recent empirical advances using neuroscience techniques to investigate how culture

influences neural processes underlying a wide range of human abilities from perception and scene processing to memory and social cognition. It also highlights the theoretical and methodological issues with conducting cultural neuroscience research. Section I provides diverse theoretical perspectives on how culture and biology interact and are represented. Sections II-VI is to demonstrate how cultural values, beliefs, practices, and experience affect neural systems underlying a wide range of human behavior from perception and cognition to emotion, social cognition, and decision making. The final section presents arguments for integrating the study of culture and the human brain by providing an explicit articulation of how the study of culture can inform the study of the brain and vice versa.

The Neuroscience of Adolescence Adriana Galván, 2017-07-10 As scientific inquiry and public interest in the adolescent brain grows, so too does the need for an accessible textbook that communicates the growing research on this topic. *The Neuroscience of Adolescence* is a comprehensive educational tool for developmental cognitive neuroscience students at all levels as it details the varying elements that shape the adolescent brain. Historical notions of adolescence have focused on the significant hormonal changes that occur as one transitions from childhood to adolescence, but new research has revealed a more nuanced picture that helps inform our understanding of how the brain functions across the lifespan. By emphasizing the biological and neurobiological changes that occur during adolescence, this book gives students a holistic understanding of this developmental window and uniquely discusses the policy implications of neuroscience research on the lives of young people today.

The electronic Bible is here to stay packaged in software on personal computers available as apps on tablets and cell phones Increasingly students look at glowing screens to consult the Bible in class and congregants do the same in Bible study and worship Jeffrey S Siker asks what difference does it make to our experience of Scripture if we no longer hold a book in our hands if we again scroll through Scripture How does the flow of electronic Scripture change our perception of the Bible s authority and significance Siker discusses the difference made when early Christians adopted the codex rather than the scroll and Gutenberg began the mass production of printed Bibles He also reviews the latest research on how the reading brain processes digital texts and how churches use digital Bibles including American Bible Society research and his own surveys of church leaders Siker asks does the proliferation of electronic translations reduce the perceived seriousness of Scripture Does it promote an individualistic response to the Bible How does the change from a physical Bible affect liturgical practice His synthesis of the advantages and risks of the digitized Bible merit serious reflection in classrooms and churches alike The Emotional Brain and the Guilty Mind Federica Coppola,2021-02-11

This book seeks to reframe the normative narrative of the culpable person in American criminal law through a more humanising lens It embraces such a reframed narrative to revise the criteria of the current voluntarist architecture of culpability and to advance a paradigm of punishment that positions social rehabilitation as its core principle The book constructs this narrative by considering behavioural and neuroscientific insights into the functions of emotions and socio environmental factors within moral behaviour in social settings Hence it suggests culpability notions that reflect a more contextualised view of human conduct and argues that such

revised notions are better suited to the principle of personal guilt Furthermore it suggests a model of punishment that values the dynamic power of change of individuals and acknowledges the importance of social relationships and positive environments to foster patterns of social re integration Ultimately this book argues that the potential adoption of the proposed models of culpability and punishment which view people through a more comprehensive lens may be a key factor for turning criminal justice into a less punitive more inclusionary and non stigmatising system
